Knowledge Base

Before we get started...

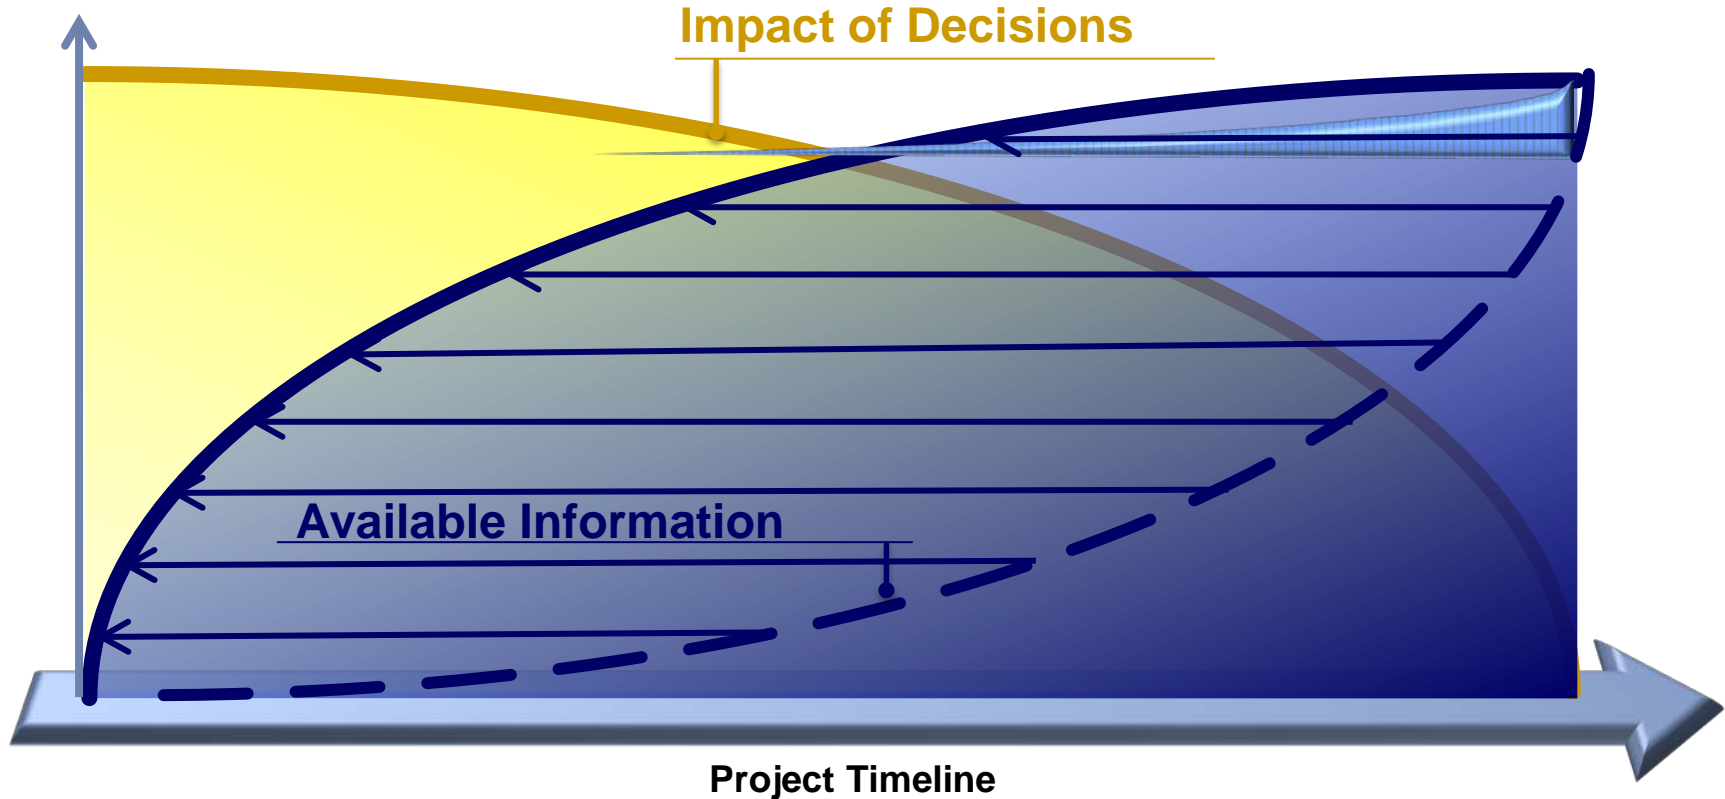

Guidelines and such are no substitute for talking with the experienced engineers in your office, colleagues, fabricators, erectors, or NSBA!!!!

Right Information at the Right Time

Right Information at the Right Time

AASHTO/NSBA Collaboration

Smarter.
Stronger.
Steel.

AASHTO/NSBA Steel Bridge Collaboration

- Provides a forum where professionals can work together to improve and achieve the quality and value of steel bridges through standardization of design, fabrication and erection.
- Over 20 years!
- **Specifications and Guidelines**
 - Specifications:
 - Written in “spec language”
 - Can be adopted as a contract document
 - Guidelines:
 - Written as a reference
 - Consensus of the steel industry
- ALL ARE FREE!!!

March 10, 2020

AASHTO/NSBA Steel Bridge Collaboration

Recent AASHTO Approved Documents

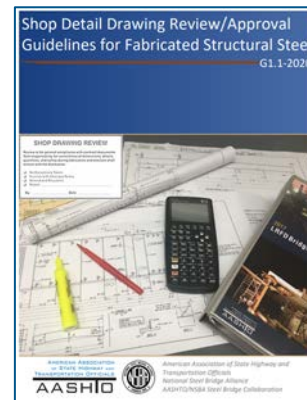

- S10.1 – Steel Bridge Erection
- G14.2 – Guidelines for Field Repairs and Retrofits of Steel Bridges

- G12.1 – Constructability, Section 1.4

Next Meeting

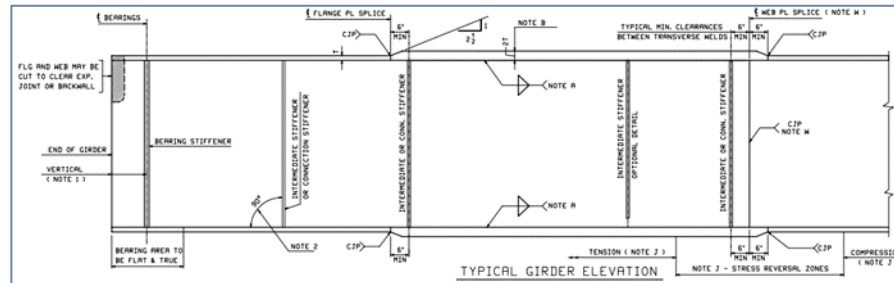

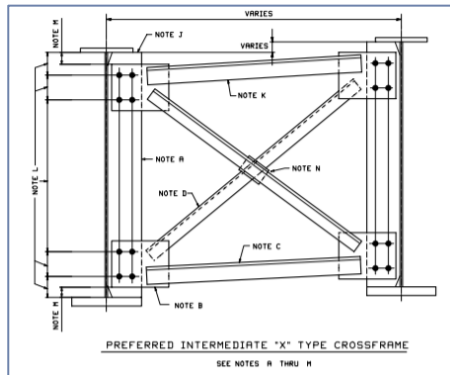

- Spring April 16-18 Providence RI

AASHTO/NSBA Steel Bridge Collaboration

Guidelines for Design Details (G1.4-2006)

- Collection of sample design details that allow for the economical fabrication and erection of bolted splices, cross frames, and stiffeners.
- When in doubt regarding a specific design detail, this should be the engineer's first reference

Guidelines for Design Details

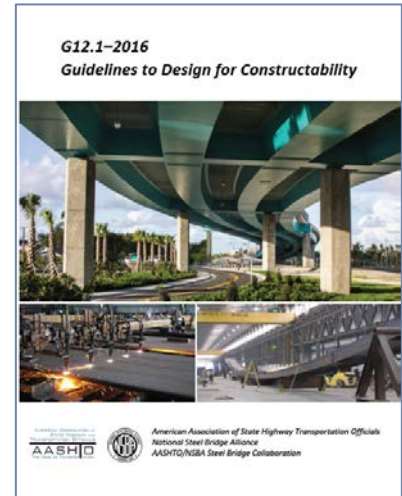

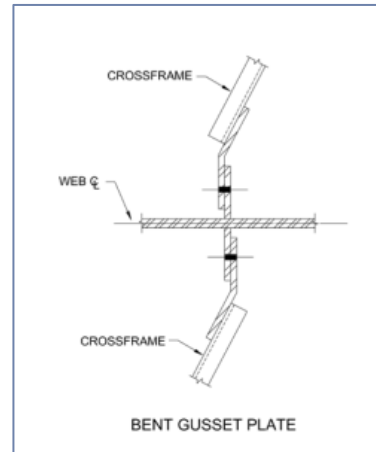

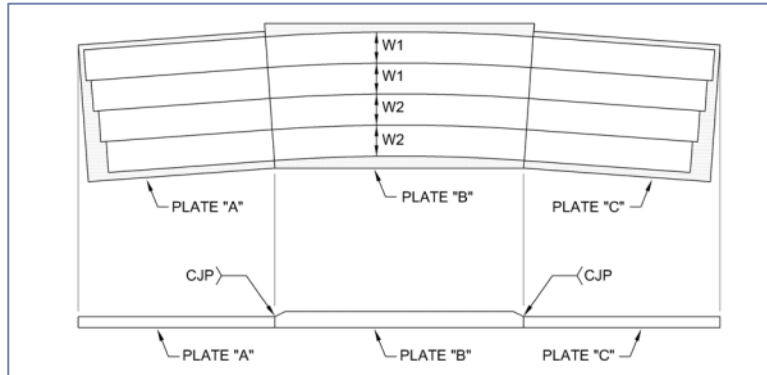

AASHTO/NSBA Steel Bridge Collaboration

AASHTO/NSBA Steel Bridge Collaboration

Guidelines for Design for Constructability (G12.1-2020)

- Provides engineers with design and detailing recommendations to help make steel girder type bridges more easily fabricated and constructible.
- Refer to this guideline for a better understanding of certain details can affect fabrication, and for general guidance to make better informed decisions during design.

AISC's Need For Speed Initiative

Standard Designs for Straight I-Girder Bridges – In Progress

- **Motivation:**

- Steel provides great flexibility in design.
- Engineers are routinely confronted with repetitive design decisions regarding material thickness and sizes for the routine steel I-girder bridges.

- **Objective:** Develop bridge standards

- 1, 2, 3, and 4 span arrangements.
- Optimize and standardize web, flange, stiffener, and field splice plate sizes from typical mill plate widths and thicknesses.
- Provide cost-efficient diaphragm and cross-frame standards.

- **Status:**

- Single span standards completed and awaiting posting.
- Two, three, and four-span standards will be posted on a rolling release into the beginning of 2024.

Material Availability

Material Availability

- MYTH – Contractor is always waiting for steel....
 - Completed girders and cross-frames stored on-site

Abstract based on *Journal of Management Education* 32(10):1039-1052, 2008.

Material Availability

- Steel Plate Lead times – typically in 8-10 week range
- Smaller quantities probably in stock at Service Centers

Material Availability

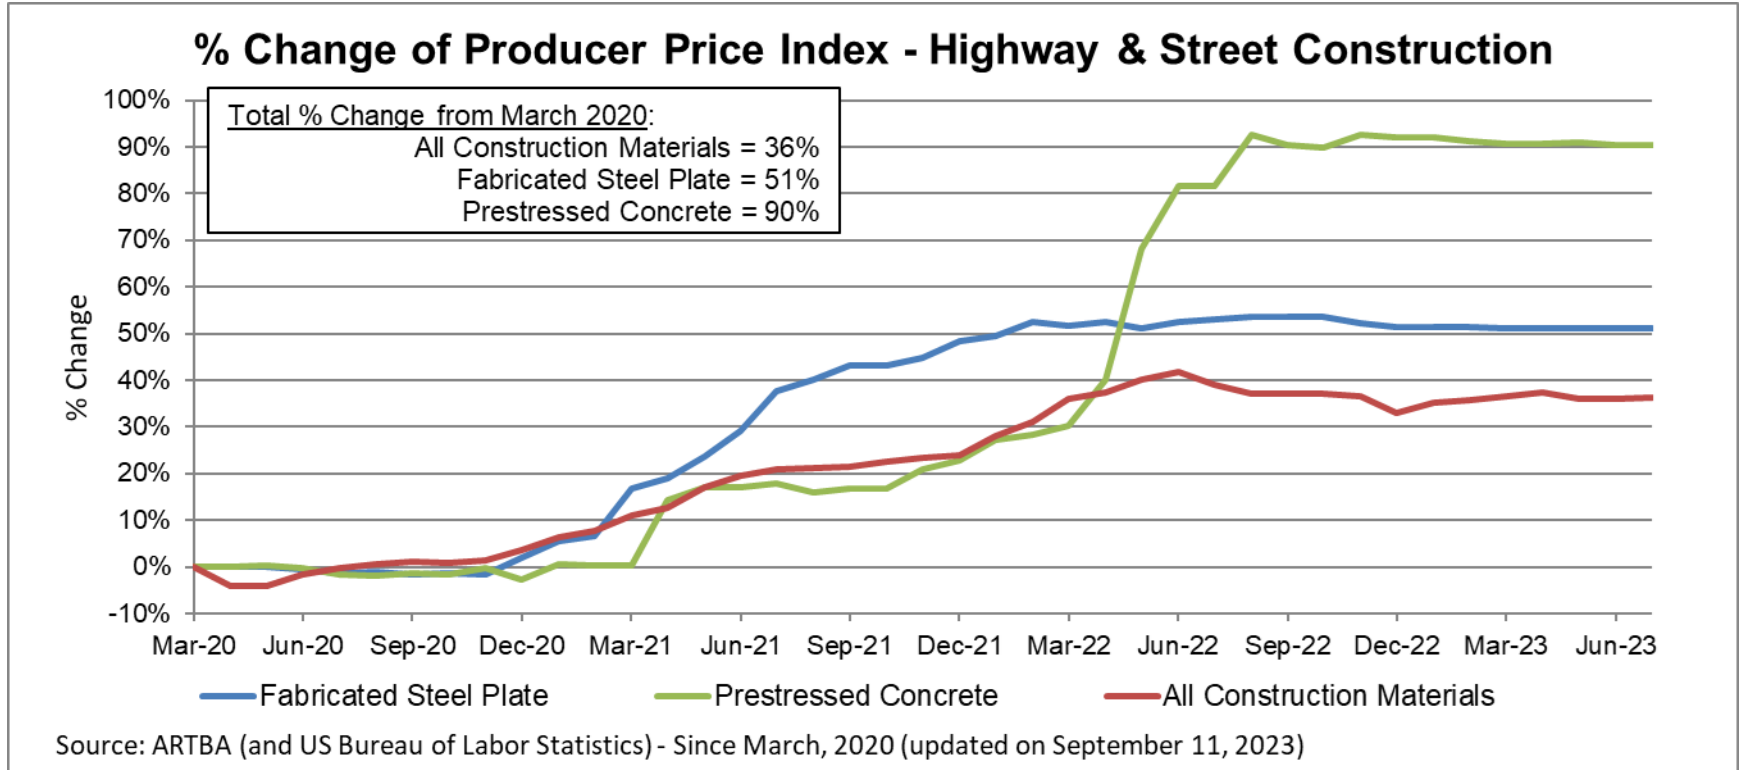

- Capacity continues to improve, becoming stronger
- Balanced Approach to Bid Letting helps capacity
- New Nucor Kentucky Plate Mill
 - Increases plate capacity (Adds approx. 120,000 tons overall steel products)
 - Improved lean processes
 - Improved sustainability

Material Availability – Emergency Situations

- I-95 Penn Bridge
- Emergency Situations differ for lead times
- Website and document for handling emergency projects

Historical Fabricated Steel Costs

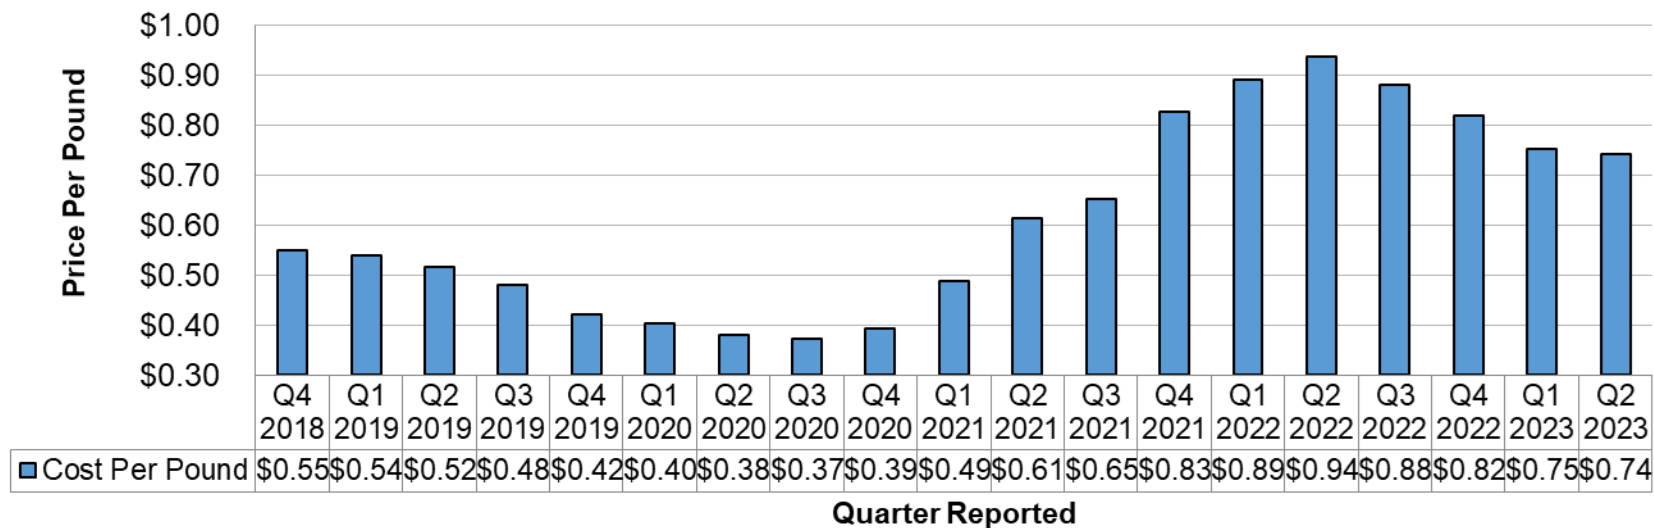

Also available at artba.org/economics/materials-dashboard/

Average Mill Price of A709-50W

Size 1 ½ in. thick x 96 in. wide x 636 in. long

Average Price of A709-50W (domestic mills, excluding shipping)

Raw material pricing presented in this chart is a small snapshot of a limited time and is not representative of long term historical and future trends.

 - Girder weights
 - Shear connector spacing
 - Camber tables

National Steel Bridge Alliance
Continuous Span Standard Solutions

From first cut... ...to final concept.

- We've taken the iteration work out of selecting preliminary girder sizes.
- Save time during the TS&L project phase.
- Rapid comparison of cost effective solutions.

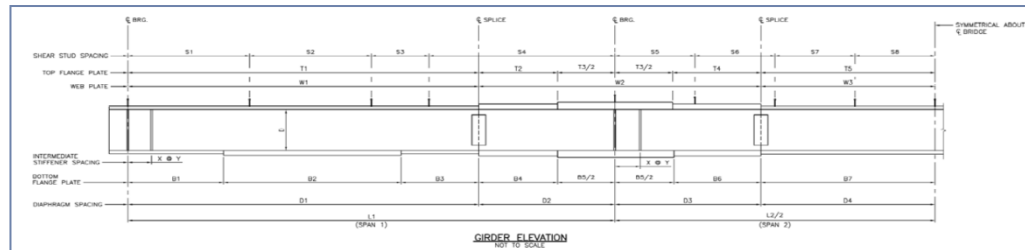

The National Steel Bridge Alliance (NSBA), a division of the American Institute of Steel Construction (AISC), is dedicated to advancing the state-of-the-art of steel bridge design and construction.

This national, non-profit organization is a unified voice representing the entire steel bridge community bringing together the agencies and groups who have a stake in the success of steel bridge construction.

There's always a bridge solution in steel.

Skewed and Curved Steel I-Girder Bridge Fit

- **Standalone Summary (6 pages)**
- **Full Document (47 pages)**
- Explains Fit Conditions
 - No Load Fit
 - Steel Dead Load Fit
 - Total Dead Load Fit
- Provides Recommended Fit Conditions for
 - Skewed Bridges
 - Curved Bridges
 - Curved Bridges with Skewed Supports

Skewed and Curved Steel I-Girder Bridge Fit

NSBA Technical Committee, Fit Task Force
Brandon Chavel, Domenic Coletti, Karl Frank, Mike Grubb, Bill McInerney, Ronnie Medlock and Don White

This is a stand-alone summary that is complimentary to a larger guide document on fit published by the NSBA.

What is Fit and Why is it Important?

The "fit" or "fit condition" of an I-girder bridge refers to the deflected girder geometry associated with a specific load condition in which the cross-frames or diaphragms are detailed to connect to the girders. Consideration of the fit condition is important because the appropriate fit decision can provide a significant benefit to the constructability and the overall performance of the bridge system.

In all bridge systems (trusses, arches, etc.) the steel components change shape between the fabricated condition, the erected condition, and the final condition. Therefore the associated relationship, or fitting, of the members also changes. When the changes are small, the fit choice can be inconsequential, but when the changes are large, the proper fit choice is essential for achieving a successful project.

Article 6.7.2 of the AASHTO LRFD Bridge Design Specifications (8th Edition, 2017) specifies that the contract documents should state the fit condition for which the cross-frames or diaphragms are to be detailed for the following I-girder bridges:

- Straight bridges where one or more support lines are skewed more than 20 degrees from normal;
- Horizontally curved bridges where one or more support lines are skewed more than 20 degrees from normal and with an L/R in all spans less than or equal to 0.03; and
- Horizontally curved bridges with or without skewed supports and with a maximum L/R greater than 0.03.

where L is the span length bearing to bearing along the centerline of the bridge and R is the radius of the centerline of the bridge cross-section.

Dead Load Camber – Article 6.7.2

The “Fit” Decision

- Affects design decisions regarding rotation demands on the bearings.
- Affects internal force effects for which the cross-frames and girders must be designed.
- Allows Fabricator/Detailer complete shop drawings and successfully fabricate the bridge components.
- Allows Erector/Contractor assemble the steel and achieve the desired geometry in the field.

NSBA Steel Bridge Handbook

Smarter.
Stronger.
Steel.

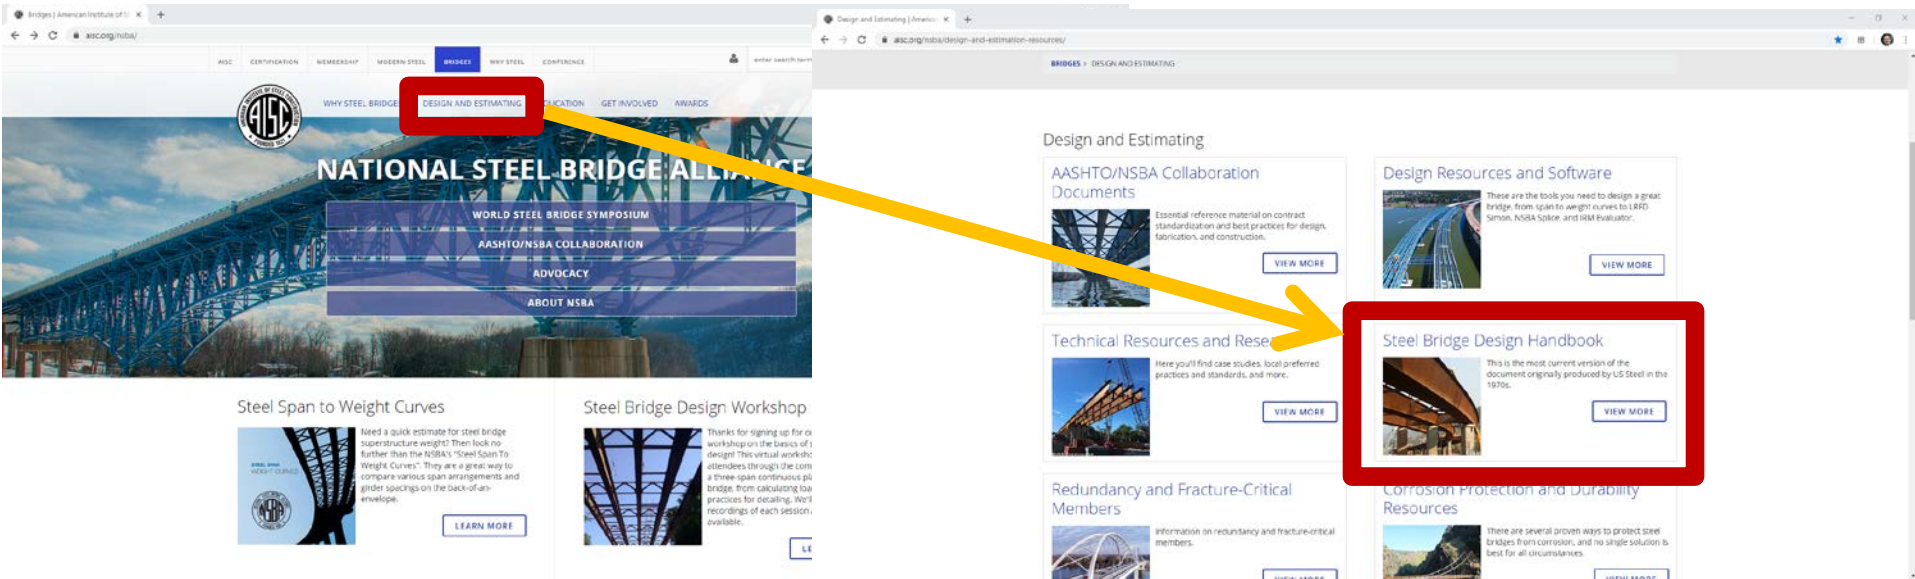

NSBA Steel Bridge Design Handbook

- 25 Volumes
 - 19 Written Chapters
 - 6 Design Examples
- Updated for AASHTO LRFD 9th Edition

NSBA Steel Bridge Design Handbook

History of the Handbook

- Highway Structures Handbook
 - US Steel, 1970's
- AISC
 - Several updated chapters over several years
 - LFD and LRFD design examples
- NSBA
 - Update for LRFD and a few new chapters
- FHWA
 - Provided funding to update and complete in 2012
 - Updated again in 2016
- NSBA
 - NSBA took back over in 2021 and performed the most recent update

NSBA Steel Bridge Design Handbook

Chapters

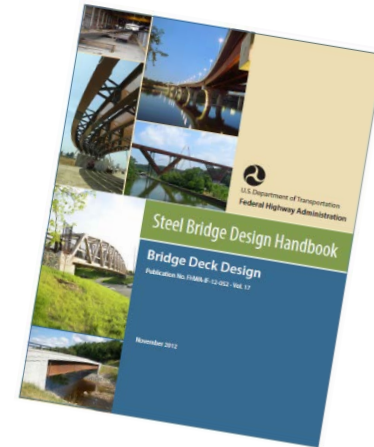

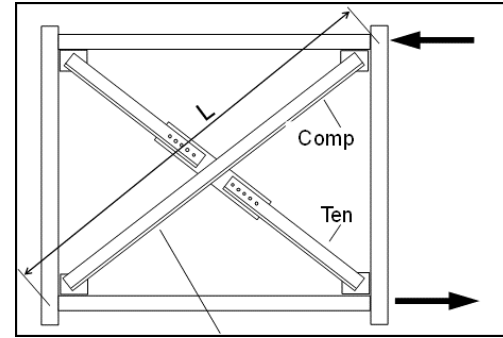

1. Bridge Steels and Their Mechanical Properties
2. Steel Bridge Fabrication
3. Steel Bridge Shop Drawings
4. Structural Behavior of Steel
5. Selecting the Right Bridge Type
6. Stringer Bridges: Making the Right Choices
7. Loads and Load Combinations
8. Structural Analysis
9. Redundancy

NSBA Steel Bridge Design Handbook

Chapters (cont'd)

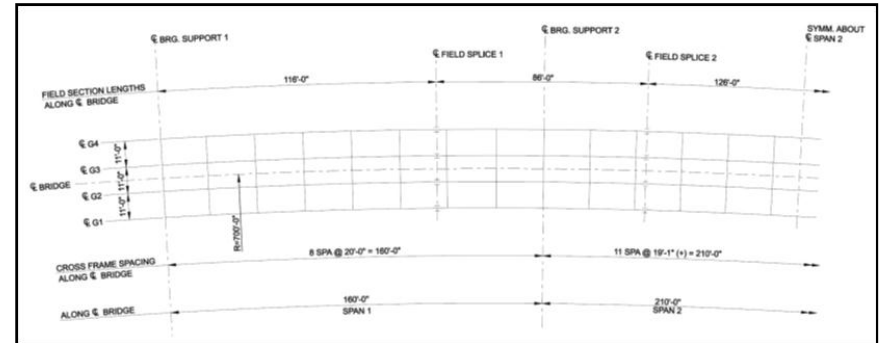

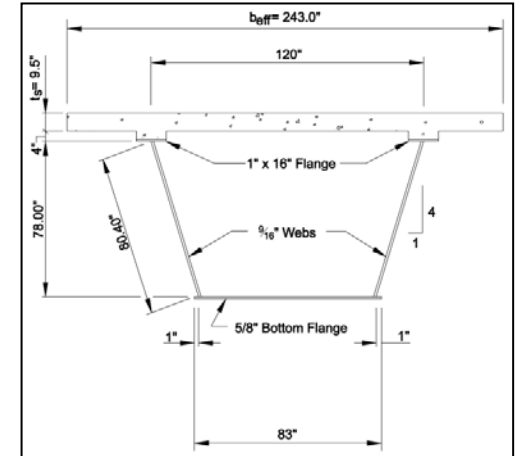

- 10. Limit States
- 11. Design for Constructability
- 12. Design for Fatigue
- 13. Bracing System Design
- 14. Field Splice Design
- 15. Bearing Design
- 16. Substructure Design
- 17. Bridge Deck Design
- 18. Load Rating of Steel Bridges
- 19. Corrosion Protection of Steel Bridges

Vol. 4 – Structural Behavior of Steel

- Includes:
 - Member Behavior and Strength Design
 - Tension Members
 - Compression Members
 - I-section Flexural Members
 - Combined Flexural and Torsion
 - Box-Section Flexural Members
 - Miscellaneous Flexural Members
 - Combined Flexure and Axial Load

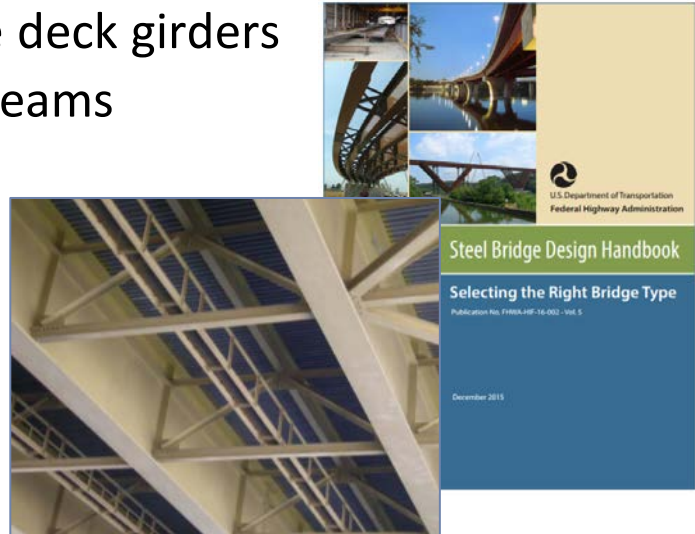

NSBA Steel Bridge Design Handbook

Vol. 5 – Selecting the Right Bridge Types

Vol. 6 – Stringer Bridges: Making the Right Choices

- **Includes:**
 - Discussion on Various Bridge Types and when appropriate
 - Details encountered in composite deck girders
 - Welded plate girders and rolled beams
 - Specific design details

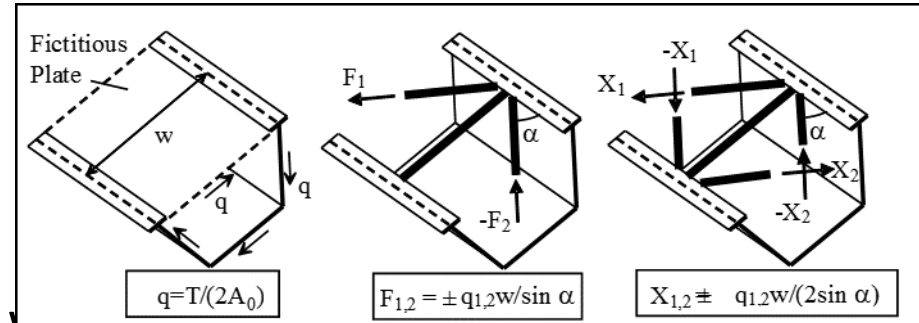

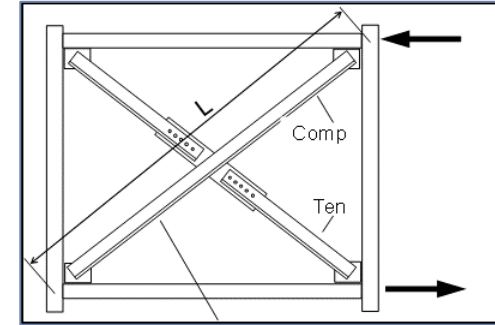

NSBA Steel Bridge Design Handbook

Vol. 13 – Bracing System Design

- **Includes:**

- Bracing of I-Girders
 - Stability & Strength / Skew Effects
 - System Buckling
- Bracing of Tub Girders
 - Top Lateral Bracing
 - Intermediate Bracing
- Bracing Member Design
 - Compression & Tension / WTS & angles / connections
